

# Programming Language Concepts Homework 3

Due Wednesday Oct 2; Joseph Sepich (jps6444)

## 1 Problem 1

### 1.1 Part 1

$L(R) = (a|b)(a|b)(a|b)$

1. "aaa"
2. "aab"
3. "aba"
4. "abb"
5. "baa"
6. "bab"
7. "bba"
8. "bbb"

### 1.2 Part 2

$L(R) = a(aa|bb)^*b$

This set will be infinite, so I will write down the 7 shortest.

1. "ab"
2. "aaab"
3. "abbb"
4. "aaaaab"
5. "aaabbb"
6. "abbbbbb"
7. "aaaaaaab"

## 2 Problem 2

### 2.1 Part 1

Write a regular expression with non empty binaries that start and end with the same digit.

$L(R) = ((1(1|0)^*1)|(0(1|0)^*0))$

### 2.2 Part 2

Write a regular expression for declarations of variables of type int.

$L(R) = \text{int} \backslash sID(, ID)^* = N(, (ID|N))^*$

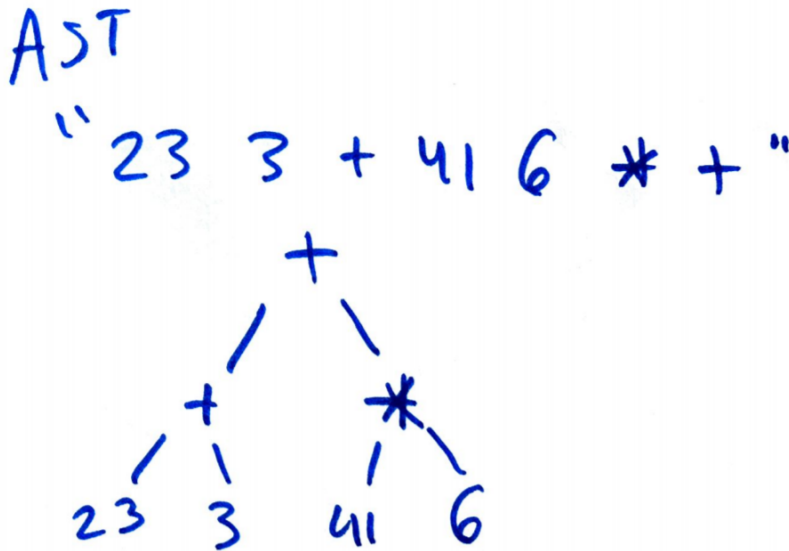

THIS IS NOT CORRECT, DOES NOT MATCH NUMBER OF VARIABLES DECLARED

### 3 Problem 3

#### 3.1 Part a

$\text{Expr} \rightarrow \text{Expr Expr} - \mid \text{Expr Expr} + \mid \text{Expr Expr} * \mid \text{Expr Expr} / \mid \text{N}$

#### 3.2 Part b

#### 3.3 Part c

$\text{Expr} \rightarrow \text{Expr Expr} + \rightarrow \text{Expr Expr Expr} * + \rightarrow \text{Expr Expr N} * + \rightarrow$   
 $\text{Expr N N} * + \rightarrow \text{Expr Expr} + \text{N N} * + \rightarrow \text{Expr N} + \text{N N} * + \rightarrow$   
 $\text{N N} + \text{N N} * + \rightarrow \text{N N} + \text{N 6} * + \rightarrow \text{N N} + 41 6 * + \rightarrow$   
 $\text{N 3} + 41 6 * + \rightarrow 23 3 + 41 6 * +$

### 4 Problem 4

$\text{Paren} \rightarrow \epsilon \mid \text{Paren } ( ) \mid ( ) \text{Paren} \mid ( \text{Paren} )$

### 5 Paroblem 5

#### 5.1 Part 1

#### 5.2 Part 2
